To the hiring team,

As a former Team USA Paratriathlete (single leg amputee), I spent the past 5 years running my own personal training business and I made an absolute killing! Sadly, due to Covid-19, I have been forced to dissolve my business. But even through these dark times I have managed to see the light and use this opportunity to reassess my career path and dive headfirst into software development!

Studying kinesiology and understanding the human body and all of it's interdependencies is extremely complex. I found that the logic behind problem solving, at a level of such complexity, was one of the biggest things that I LOVED about my previous career. But ever since learning how to code, I have come to find that computer science is truly on a completely different level of complexity and I just can't get enough of it!

Since I've started coding, I've managed to learn a multitude of languages across multiple different platforms and frameworks, graduated from a Coding Bootcamp at Northwestern University and I've even landed an awesome internship where I've been able to put what I've learned into practical, real world application! I learn quickly and I'm eager to continue learning more! I hope my resumé finds you well, and as a motivated Junior Developer, I do believe that my ambition, drive and determination to learn, overcome and succeed, will be a great addition to your team!
